- **Proprietary Engineering, Forming Systems, and Designs**
- **Architectural Acceptance**
- **Certified Training**
- **Support Staff**
- **Worldwide Networking**
- **Supply Coordination**
- **Free Market Pricing**
- **Market Protection**

Any one of these benefits would be worth the MAS™ licensing fee. When you put them all together success becomes a matter of fact. The following outline will give you a better understanding:

20 year warranty – Never in the history of construction has there been a warranty that protects you like the MAS™ warranty. We dare you to find a 20 year structural warranty that does not exclude natural disasters!

Proprietary Engineering, Forming Systems, and Designs - When a University partners with industry to develop solutions that will change the world; you have a depth of Engineering that cannot be duplicated. This protects your business as well as gives you the confidence that you are the best.

Architectural Acceptance – Structures build around the MAS™ system can be finished to mimic or complement traditional construction. There are many facades available to allow a MAS™ system structure to blend in with any type of construction in all parts of the world.

Certified training - Modern technology is only as good as the user. We train all of our end users to be highly proficient with all of our proprietary systems.

Support Staff - 24 hour support will keep you on top of any game plan. Our support staff will keep you running around the clock in any time zone.

Worldwide Networking - Without connections the best intentions stay on the shelf. With our worldwide network of *Certified Project Coordinators (MCL-1)*, we have the connections to keep

you recession proof. It is not the past that makes you great; it is the ability to function in the present while charting plans for the future.

Supply Coordination - Why would any business spend valuable hours searching, purchasing, and worrying about supplies and equipment when they could spend that time and effort building a world-class business? The MAS™ Supply Coordination department is available to help you find the supplies, tools, and equipment you will need to be successful. MAS™ has experience coordinating shipping worldwide and maintains a database of equipment available for sale or rent from other licensees. MAS™ will work with you to certify any supplier that can assist you with compliant components, tools, forms or equipment used in the construction of the MAS™ system. The time savings realized by MAS™ coordination with a certified supply company will save you more than the MAS™ licensing fee.

Free Market Pricing - MAS™ does NOT involve itself in pricing the MAS™ system. Because the MAS™ system costs significantly less to build it is highly competitive against traditional constructions. The MAS™ system durability and resistance to natural disasters and fires gives the end user a superior position when competing against traditional structures.

Market Protection - The MAS™ certification process prohibits non-certified companies from entering areas that YOU may be working in. Please see the MAS™ certification area for more details.

Please visit MAS™ at www.modernarchstructures.com for more information about the MAS™ system.
